

Comprehensive DAG Analysis for Small Left Ventricle and Cardiovascular Events

A complete causal inference framework using Directed Acyclic Graphs

Figure 1. Directed Acyclic Graph (DAG) for Causal Relationships

Exploring the relationship between small left ventricle and cardiovascular events

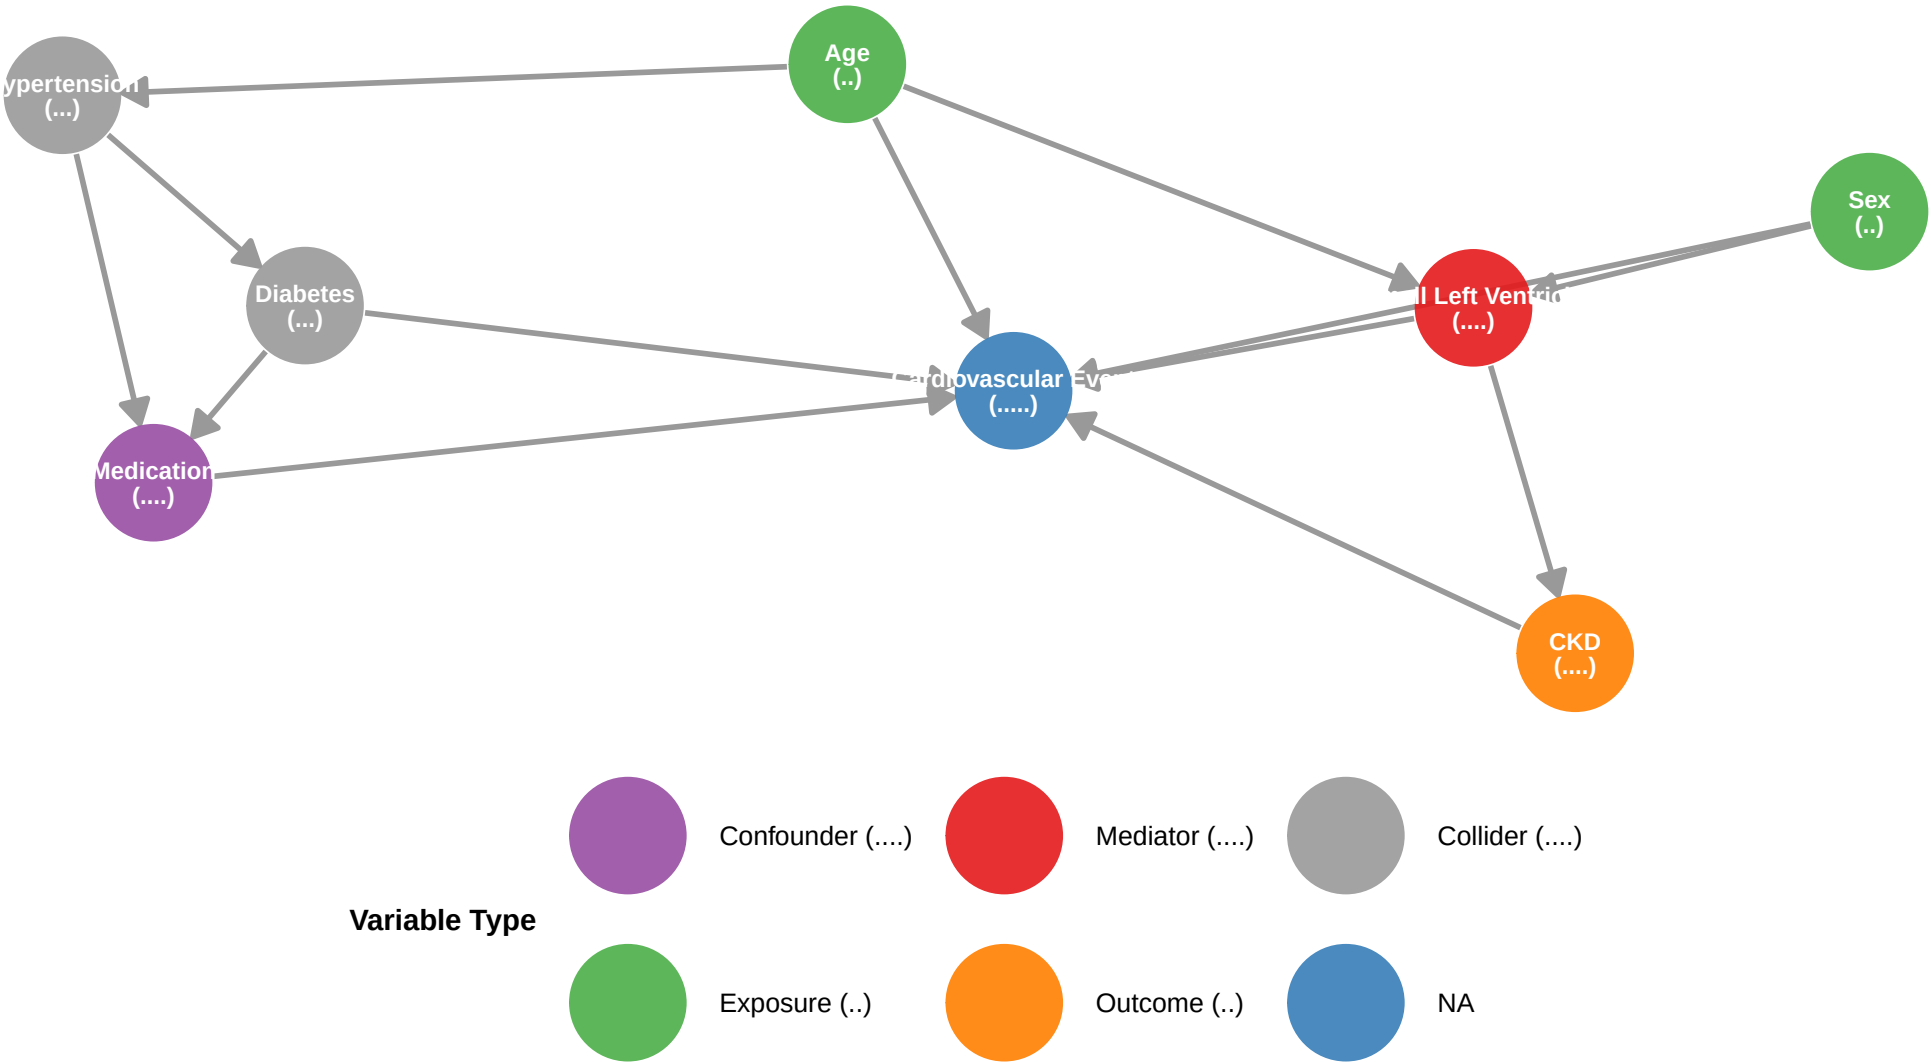

Figure 2. Minimal Sufficient Adjustment Set

Variables to adjust: Age and Sex | Do NOT adjust: CKD (mediator) and Medication (collider)

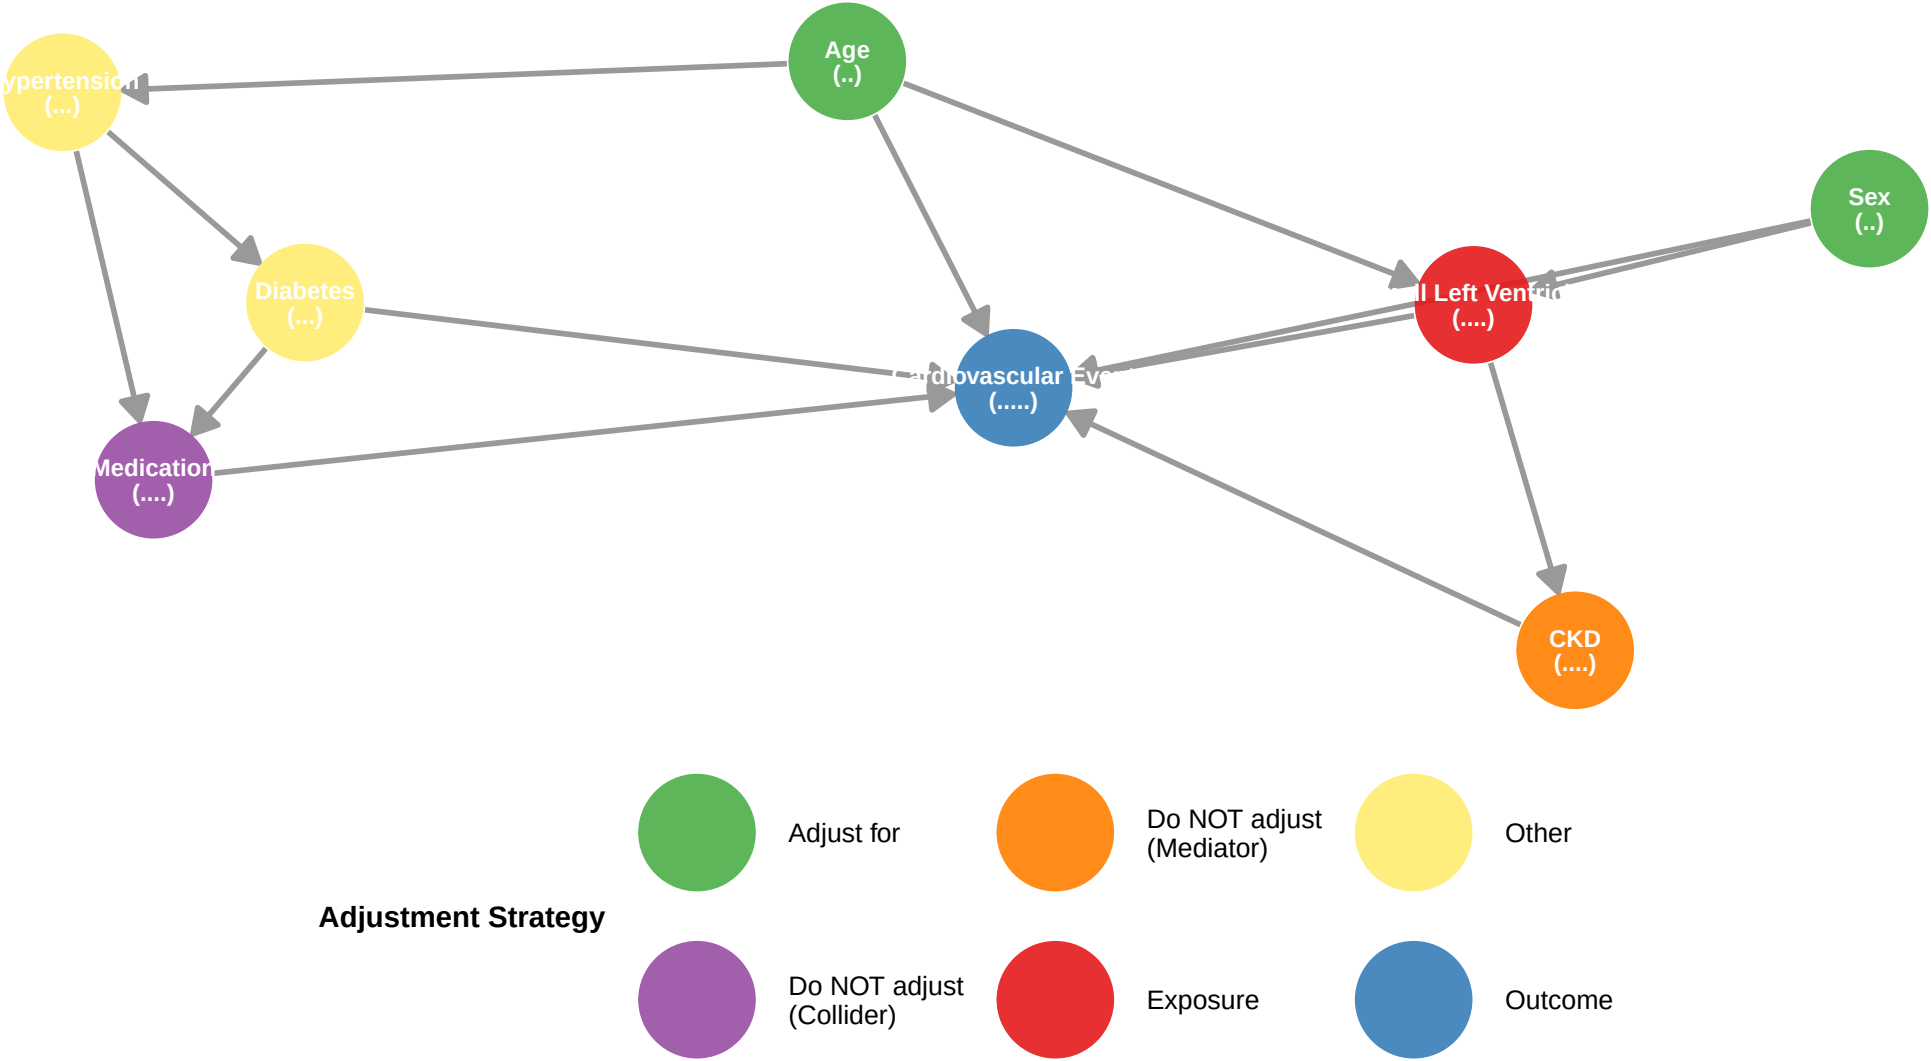

Figure 3. Complete Causal Pathway Analysis

Identifying all causal paths: direct, indirect (mediation), and backdoor (confounding)
