

# Comprehensive DAG Analysis: Left Ventricular Size and Major Adverse Events in Atrial Fibrillation

A complete causal inference framework for variable selection and confounding control

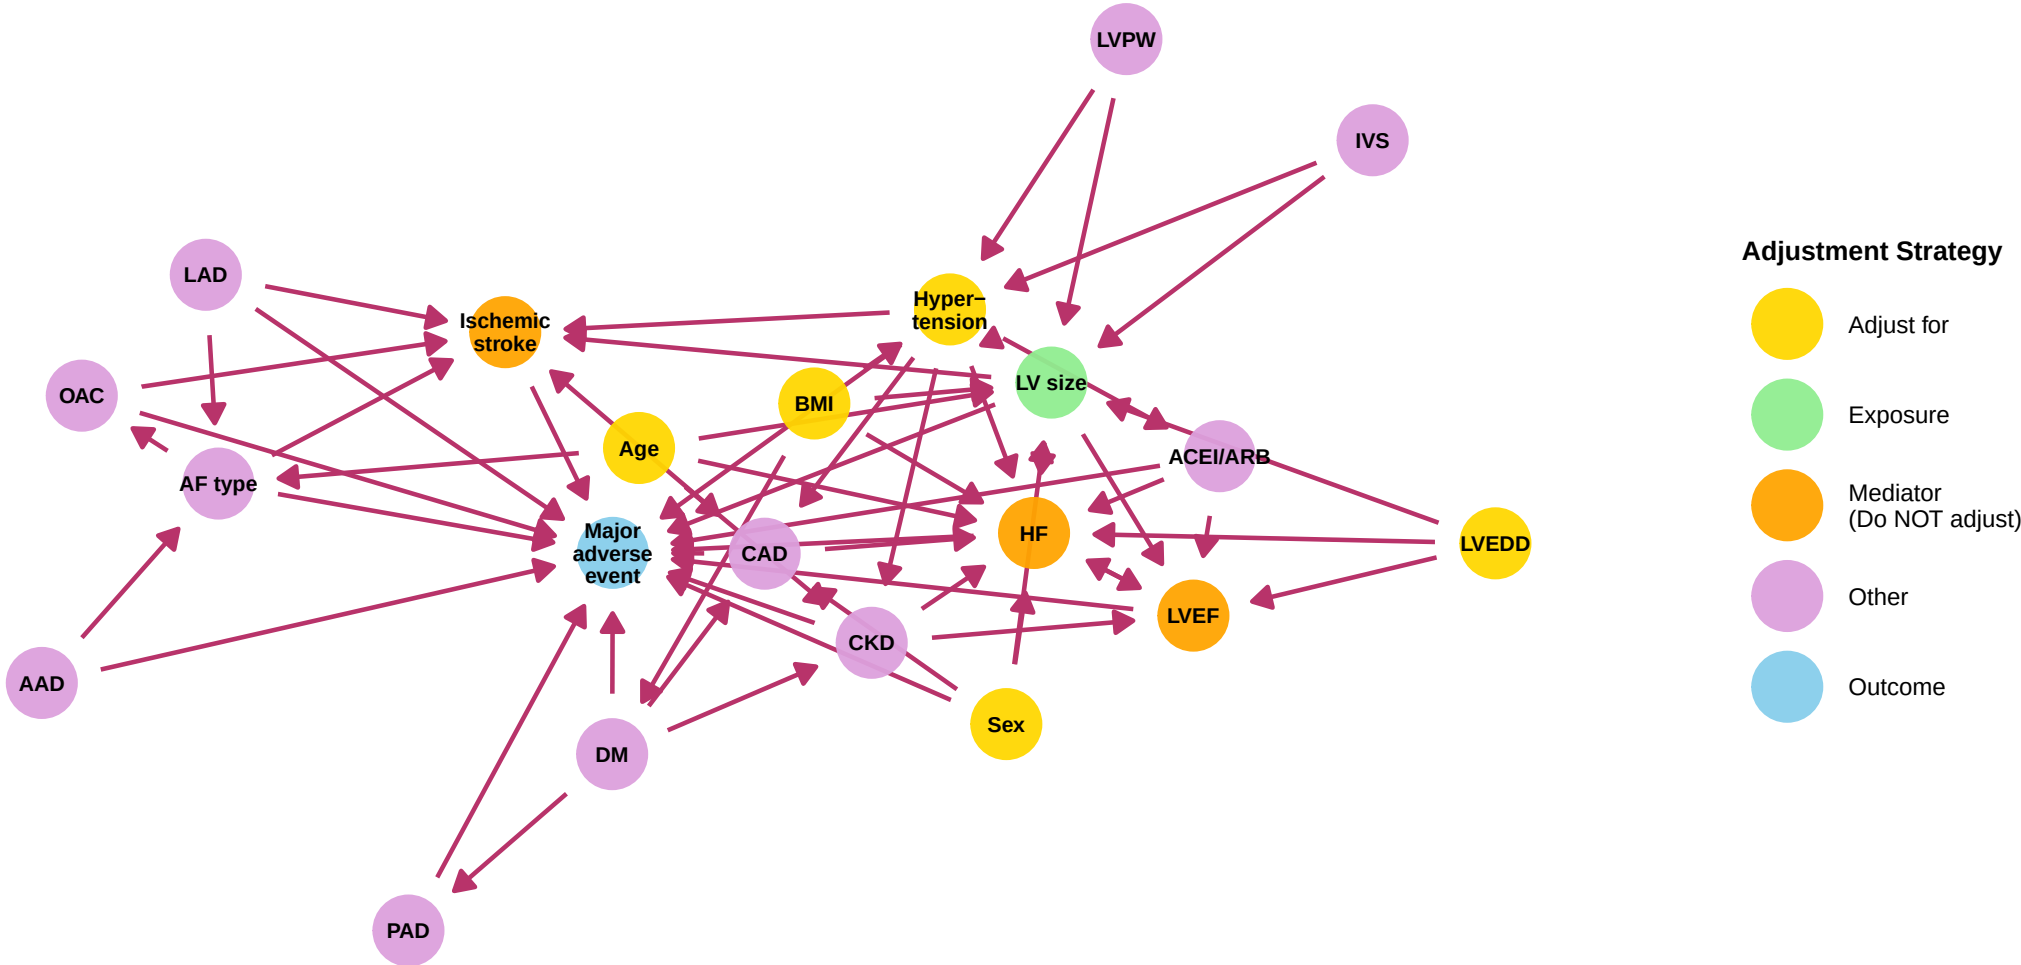

## Supplemental Figure 1. Directed Acyclic Graph

Causal relationships between left ventricular size and major adverse events in atrial fibrillation

## Figure 2. Minimal Sufficient Adjustment Set for LV Size Effect

Variables to adjust: Age, BMI, Hypertension, LVEDD, Sex

## Figure 3. Complete Causal Pathway Analysis

Direct effects, mediation pathways, and confounding relationships
